Organization - Neisha's Hardware Supply

Overview

Neisha's Hardware Supply is a small business that was founded in 2003. It started as a paper-based business to conduct transactions since the technology wasn't introduced into the business and today the business is still conducting transactions via manually writing bills etc. Introducing a Management Information System(MIS) into the business would be a great relief.

Problem

There are many problems with using a paper-based system. One problem being a business using the paper-based system is that documents can be misplaced or destroyed and it would cause a major impact on the business when it comes to doing taxes and other major documentation. Another problem it has is that shelves are over packed which makes it harder to keep track of current inventory, what was sold, and what needs to be purchased due to the paper-based management system.

Opportunity and Aim

The implementation of a Management Information System(MIS) would be a great help to the business because it would aid in relieving staff of manually keeping track of inventory, preventing loss or misplacement of goods, accurate count of stock, and total invoices for each month/year to generate summaries. This system will also contribute to modernizing the business to keep up with current modern hardware stores such as Gafoors Hardware, National Hardware, and other modern hardware stores.

Relationship to the business

Jayden De Nobrega - Employee

Neisha's Hardware is a family-owned business. During the course of his first year of university, he had an opportunity to work there part-time and got to learn the overview and insights of the business.
